► Use and Maintenance

- ◆ The thread size of the cable connector and the external enclosure is M16×1.5, the cable diameter is $\Phi 6-\Phi 8$, and the cable connector must have a corresponding explosion-proof certificate.
- ◆ The tightening torque of the internal grounding terminal is 2Nm; the external grounding bolt is M4X6, compressing the 4mm² conductor, grounding resistance less than 10 Ω .
- ◆ The entrance should be equipped with a cable gland with explosion-proof certification, and a compatible protection mode for the specified purpose.
- ◆ In addition to using the installation manual, the operator should comply with the requirements of GB 3836-13 during assembly, operation and maintenance.
- ◆ Maintenance and overhaul should comply with the requirements of GB 3836-16.
The product enclosure should be cleaned with a damp cloth.

► Warnings

- ◆ Potential electrostatic hazards, must be grounded securely, grounding resistance less than 10 Ω , only use a damp cloth to clean the product.
- ◆ Use fasteners with a yield stress of $\geq 450\text{MPa}$.
- ◆ The fireproof joints cannot be repaired or modified by the user.

► Special Conditions of Use

- ◆ Ambient temperature: $-30^{\circ}\text{C} \leq T_a \leq +60^{\circ}\text{C}$.
- ◆ Potential electrostatic hazards.
- ◆ Fireproof joints cannot be repaired or modified by the user.
- ◆ At the cable entry, cable glands or plugs with IP66 protection and separate quality certificate should be installed.

► Product Functions and Application Instructions

- ◆ The explosion-proof type air valve actuators produced by our company are Class II and Class III electrical equipment.
- ◆ A (Analogue): AC/DC24V analogue actuator can achieve 0(2)~10V or 0(4)~20mA control. The factory default is 0-10V control. If there are special requirements, they must be marked in advance when ordering, and cannot be changed on site.
